

For secure IT workstations

Cloud based Windows Defender Alerting and Inventory

Our simple and centralised cloud service meets the challenges of modern workplace management. Windows Defender ensures sophisticated protection for different types of Windows workstations. As a first solution, MAVIQ provides an optimised and centralised secure portal for Windows Defender as well as a hardware and software inventory.

Windows Defender alerts and notifications are sent to IT managers in real time as required in order to ensure that workstations are adequately protected at all times.

Why customers use MAVIQ

- Windows Defender alerts and notifications
- Central dashboard
- Scalable
- Versatile and reliable
- No on-site infrastructure required
- Client service with minimal footprint
- Cloud-based software solution (hosting in Western Europe)
- Combination with hardware and software inventories

Unique

- Closes gaps in endpoint management with Windows Defender
- Security-related information is sent in real time

Alerts and notifications for Windows Defender

Universal

- Independent of user location
- Flexible and diverse area of use
- Standardised Windows agents

Central portal available everywhere

Manageable

- Access to the most important information at all times to protect end devices
- Latest inventory information about hardware and software used

Enhanced by an inventory

«For Windows Defender. Central alerts and notifications. Made simple with MAVIQ.»
